Yubikey, a physical key that provides 2-factor authentication

CS 88S

Protecting yourself: apps, methods, practices Week 6

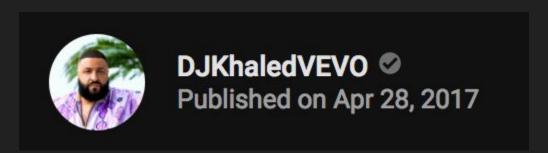

Agenda

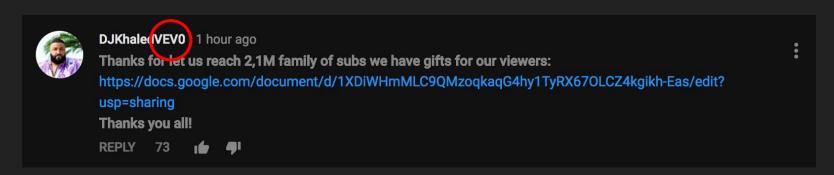

- WireShark Demo, Final Project
- Review last week's material
- HTTPS, Safe Practices Online
- 2 Factor Authentication
- Back up everything
- Use a Password Manager

Agenda

- WireShark Demo, Final Project

HTTPS, abridged

Def: HTTPS is HTTP over Secure Socket Layer.

HTTPS **encrypts** an HTTP message prior to transmission and **decrypts** a message upon arrival via **SSL Transaction**.

SSL Transaction

Browser

Generate Public Key using **RSA** Algorithm

Give Server Public Key

Server

Encrypt data using Browser's public key

Send back to Browser

Browser

Decrypt data using its own private key

Source: http://bit.ly/2pTzoTY

***Note: To further understand the relationship between SSL and HTTP, you'll first need to understand the OSI model of Computer Networks, which is out of the scope of this class.

Frank Chen | Spring 2017
