# CS 88S: Final Project

Description

One of my goals in teaching CS 88S is to share my knowledge of cybersecurity with all of you, and in turn, allow you to be advocates for a more cybersecurity-aware society.

For the **class project**, I would like each of you to come up with an easy way for others to understand <u>one concept</u> covered in class.

I understand that everyone learns and expresses ideas differently, so there are two options for this project. Choose one of the following:

Option 1: Write a 1+ page essay (12 pt font, Garamond) about one topic covered in class. Hypothetically, if someone who is unfamiliar with the topic asks you about it, your 1 page essay should clearly and succinctly explain the topic!

Option 2: Create an original/expressive platform to explain a topic taught in class to an audience that may not be familiar with the topic. Potential ideas include : poetry, art, website, poster, infographic etc. Talk to Frank about your planned platform and topic before you begin!

Grading

I encourage you all to put in your best effort, but the minimum requirement would be one page of content. As stated in the syllabus, turning in this project is <u>required</u> to receive a 'Pass' in the class.

Due Date

If you are working on a physical project (piece of artwork), please turn in during **last day of class, Tuesday June 6**. If you are working on a digital project, please email content or website link to frank.chen@ucla.edu by **10am Tuesday, June 6**.
